

ABSTRACT OF THE DISCLOSURE

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive 5 element comprising:

(a) a charge transport material having the formula

where Y_1 and Y_2 are, each independently, an arylamine group;

R_1 and R_2 comprise, each independently, H, an alkyl group, an alkenyl group, a 10 heterocyclic group, or an aromatic group;

X_1 and X_2 , each independently, are bridging groups;

E_1 and E_2 are, each independently, an epoxy group; and

Z is a linking group comprising an alkyl group, an alkenyl group, a heterocyclic group, or an aromatic group; and

15 (b) a charge generating compound.

The charge transport materials can be crosslinked to a polymeric bind, either directly or through a crosslinking agent. Corresponding electrophotographic apparatuses and imaging methods are described.
